

Advanced sustainable finance with our

ESG-SCORING Solution

CredaRate

EXPERTS FOR CREDIT RISK & ESG

Our innovative ESG Scoring enables you to collect and assess sustainability-related information on corporates, real estate and ships.

It systematically captures both ESG risks and ESG impacts – from internal credit decisions through to disclosure.

With a team of more than 60 experts spanning IT, credit risk, statistics and compliance, we serve over 45 clients, including institutions under ECB supervision and within the IRBA.

Comprehensive ESG analysis

Our scoring models, that have been in production since 2022, take an integrated view of the three ESG dimensions – from CO₂ emissions to corporate culture and corporate governance.

Early risk detection & benchmarking

Identify opportunities and risks at an early stage and benchmark your borrowers and portfolios against industry peers.

Data-driven & independent

We aggregate data from trusted sources, validate it and calculate transparent, comparable scores.

Modular & API-based

Our solution integrates seamlessly into existing systems via interfaces and comprehensive reports.

Regulatory compliance

Support your ESG reporting obligations under CSRD, Taxonomy, Pillar III & SFDR with consistent, guidelines-based data quality.

“Standardised, complete and quality-assured data is essential for assessing ESG risks. Our ESG scoring delivers reliable results even when information is incomplete, using fallback solutions and third-party sources. Avoid regulatory risk by closing your ESG assessment gaps with CredaRate.”

Let 's talk about your opportunities:
